Allowable Subject Matter

Claims 1-38 are allowed.

Response to Amendment

Claims 39-58 are canceled.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or

additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR

1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the

payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with

Timothy N. Thomas on December 05, 2006.

The application has been amended as follows:

In the specification, Brief description of the drawings, page 10 after the last line of the

page, the following has been entered: see attachment (from Fig. 35-Fig. 39).

In the Abstract, the previous abstract has been replaced by the following abstract: see

attachment.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Alvin J. Stewart whose telephone number is 571-272-4760. The

examiner can normally be reached on Monday-Friday 7:00AM-5:30PM(1 Friday B-week off).

Re: U.S. Patent Application No. 10/717,687

Examiner: Stewart

DESCRIPTION OF THE DRAWINGS

FIG. 35 shows a plug of disc annulus material used to make an implant according to one embodiment of the present invention.

FIG. 36 shows a straightened segment of disc annulus material used to make an implant according to one embodiment of the present invention.

FIG. 37 shows disc annulus material being compressed to make an implant according to one embodiment of the present invention.

FIG. 38 shows compressed disc annulus material effective for use as an implant according to one embodiment of the present invention.

FIG. 39 shows an alternative embodiment of compressed disc annulus material effective for use as an implant according to one embodiment of the present invention.

ABSTRACT

A method for implanting a prosthetic spinal disc nucleus in an intervertebral disc nucleus space generally includes: (a) making a hole in the annulus of a disc, with the hole having an undilated size that is smaller than the cross-sectional size of a folded prosthetic disc nucleus; (b) using an implant instrument to dilate the hole in the disc annulus; (c) using the implant instrument to pass a straightened prosthetic disc nucleus through the dilated hole and into the disc nucleus space; (d) withdrawing the implant instrument and allowing the hole in the disc annulus to return to a size smaller that its dilated size; and (e) causing or allowing the prosthetic disc nucleus to assume a folded configuration with a cross-sectional size that is larger than its straightened size. A device for use in the method is also disclosed.
